Appendix 1 – Relevant Plans and Programmes

Appendix 2 – Baseline data

1. Introduction

Background

- 1.1. Taylor Young is currently preparing a feasibility study for an AAP for the Staveley Works Corridor on behalf of Chesterfield Borough Council. The Staveley AAP will seek to designate appropriate land uses for the area including residential, employment, open space, leisure and community uses. Principally, this should encompass sustainable development in a landscape setting, rather than landscape within a built setting. While the AAP area seeks to be self sustaining, it will also look to be connected to surrounding settlements and meet the needs of the communities in these areas.
- 1.2. This Sustainability Appraisal (SA) Scoping Report (including Strategic Environmental Assessment) forms part of the supporting documentation for the production of the Staveley Area Action Plan (AAP) and will form Stage A of the Sustainability Appraisal process.
- 1.3. The Chesterfield Core Strategy will be the parent plan to the Staveley AAP and will be consistent with it and the Regional Spatial Strategy. The AAP will provide more detailed policy.
- 1.4. The emerging Chesterfield Core Strategy has been appraised by SA which incorporates Strategic Environmental Assessment (SEA). The Chesterfield Core Strategy SA is very strategic owing to the nature of the Core Strategy as a strategic policy document. The purpose of the SA of the Staveley AAP is to focus appraisal on the direction of the detailed policies it sets, rather than repeat the assessment of the strategic direction of the plan which has already been undertaken for the Core Strategy. The SA of the Chesterfield Core Strategy, however, does set a SA framework which can be used to provide the basis for the SA of the AAP.

Strategic Environmental Assessment and Sustainability Appraisal

- 1.5. The European Directive 2001/42/EC on the assessment of the effects of certain plans and programmes on the environment, known as 'Strategic Environmental Assessment' or SEA, applies to a wide range of plans and programmes, including among others those for town and country planning and land use. The Directive applies to plans and programmes, and modifications to them, whose formal preparation began after 21 July 2004.
- 1.6. It is a requirement of the Planning and Compulsory Purchase Act 2004 that Local Development Documents (LDDs) are accompanied by a Sustainability Appraisal (SA) to promote sustainable development through better integration of sustainability considerations into the preparations and adoption of plans. SA involves assessing the degree to which an LDD reflects and promotes the principles of sustainable development and, where appropriate, makes recommendations for strengthening its sustainability performance.
- 1.7. This document has been prepared using the guidance contained within the Office of the Deputy Prime Minister (ODPM) document *Sustainability Appraisal of Regional Spatial Strategies and Local Development Documents* (November 2005). This guidance covers the requirements for both Sustainability Appraisal and Strategic Environmental Assessment. The stages required for completion of the Sustainability Appraisal process can be found in Table 1.1. Alongside each stage, information has been provided as to how the task has been completed and where it has been documented.

Stages of the SA Process	Where each task is completed
Stage A: Setting the context and objectives, establishing the baseline and deciding on the scope – Content of the Scoping Report	
A1: Identifying other relevant policies, plans and programmes, and sustainability objectives.	Section 3 of this report
A2: Collecting baseline information.	Section 4 of this report
A3: Identifying sustainability issues and problems.	Section 5 of this report
A4: Developing the SA framework.	Section 6 of this report
A5: Consulting on the scope of the SA.	Section 7 of this report
Stage B: Developing and refining options and assessing effects	This stage will be completed once the Scoping Report has been consulted on.
Stage C: Preparing the Sustainability Appraisal Report	This stage will be completed once the Scoping Report has been consulted on.
Stage D: Consulting on the preferred options of the DPD and SA Report	This stage will be completed once the Final SA Report has been consulted on.
Stage E: Monitoring the significant effects of implementing the DPD	This stage will be completed once the Final SA Report has been consulted on.

1.8. The scoping report is completed during Stage A of the SA process. The purpose of the scoping report is to define the scope of the SA with regard to the plans, in this case the Staveley AAP, sphere of influence and to define the important features of the baseline that will inform the plan.

1.9. A scoping report requires the completion of the following tasks:

- A1: Identifying other relevant policies, plans and programmes, and sustainability objectives.
- A2: Collecting baseline information.
- A3: Identifying sustainability issues and problems.
- A4: Developing the SA framework.
- A5: Consulting on the scope of the SA.

1.10. Throughout this document it is noted where each of the above tasks are completed.

2. Scope of the Sustainability Appraisal

Defining the Scope of the SA

2.1. The following factors are important in defining the scope of the SA:

- The national sustainability objectives should be used to inform the scope/sphere of the SA with regard to the type of issues it should consider.
- The criteria identified in the SEA Directive should inform the scope of the SA.
- The scope of the SA should be informed by the main principles of the plan in terms of what the plan can reasonably achieve and the spatial bounds of the plan.
- The scope of the SA must also be determined by the key baseline features of the area over which the plan applies. This ensures the scope of the SA is appropriate with regard to the aspects of the environment that it considers, and helps to tease out significant impacts of the plan.
- Additionally, the SA should have a scope or focus appropriate to the hierarchical level of the plan. For example, the Staveley AAP has been shaped by a series of policies and plans that precede it. It is important to determine the key objectives of these policies and plans, and the decisions that have been made so the scope of the plan can be determined. Therefore, the scope of the Staveley AAP has been informed by the following documents:
 - Regional Spatial Strategy for East Midlands
 - Chesterfield Core Strategy

Sustainability Appraisal

2.2. A Sustainability Appraisal is a method of assessing a plan to find out whether it is likely to promote a sustainable pattern of development, and where possible, avoid or mitigate any significant negative social, environmental or economic effects. A plan that promotes sustainable development will be one that strikes a balance between the Government's five sustainable principles set out in the publication *Securing the Future Delivering UK Sustainable Development Strategy* produced by DEFRA in 2005. The five UK Principles of Sustainable Development are:

- Living within environmental limits
- Ensuring a strong, healthy and just society
- Achieving a sustainable economy
- Using sound science responsibly; and
- Promoting good governance

2.3. The key aim of a SA is to make the plan preparation process more transparent, better documented and more clearly focused on sustainability. The process requires that policies are appraised against a range of criteria representing the objectives of sustainable development in national policy. The purpose of the SA report is to enable us to identify any significant environmental, social and economic effects of a plan early on, thus enabling changes to be made if necessary.

Strategic Environmental Assessment

2.4. Whereas SA considers the effects of the plan on a range of social, environmental and economic interests, SEA focuses on assessing environmental effects. However, there is a considerable amount of overlap, because SEA does include some social issues such as health. For consistency, and in line with current Government advice, the SEA of the Staveley AAP will be undertaken as part of the SA with the SA report, including all of the information that a SEA

Environmental Report is expected to include. SEA Directive requires the following criteria to be considered for SEAs:

- Biodiversity
- Population
- Human health
- Fauna and flora
- Soil
- Water
- Air
- Climatic factors
- Material assets
- Cultural heritage (including architectural and archaeological heritage)
- Landscape

2.5. In reading this report, the terms Sustainability Appraisal, SA and appraisal should be taken to cover both Strategic Environmental Assessment and Sustainability Appraisal unless otherwise indicated.

Staveley

2.6. Staveley is a small industrial town in north east Derbyshire, located approximately 5 miles from Chesterfield town centre and within the Borough of Chesterfield. It is connected to the strategic road network via the A619 primary route which leads between Junction 30 of the M1 motorway to the east and Chesterfield to the west, as shown on Figure 2.1.

2.7. Figure 2.1 also shows the study area in its local context. Surrounding the site is a mix of residential within a green rural setting, together with areas of large scale brownfield land and some operational industrial sites. To the north is the small village of Barrow Hill located on a hill overlooking the study area. To the east is open agricultural and industrial land, including mineral extraction and chemical works. Overlooking the site from the south is Staveley town centre. This small centre is in need of revitalising, and a masterplan is currently being prepared on behalf of Staveley Town Council. To the South west are Middlecroft and Hollingwood – two large residential communities, with small local centres, schools and other local services. To the east is agricultural land through which the River Rother and the Chesterfield Canal flow.

The Scope of the Staveley AAP

2.8. The AAP boundary and local context can be found in Figure 2.2. The site is bound to the north by a freight only railway line that is connected to the Midland Main Line and to the south by the Chesterfield Canal. The site is dissected east west by the River Rother, and north south by Works Road, which provides access to the A619 through the Hollingwood residential area. This road provides access to the Clocktower Business Centre and Devonshire Business Centre, which are located off Works Road. To the east of Works Road is the former pipe works site, of which all that remains is a large area of hardstanding. To the east of the former pipe works site are 3 lagoons and beyond these, a former landfill that has been grassed over. To the west of Works Road, between the canal and the river, is currently vacant, but was formerly an open-cast mining area, prior to being used as a landfill site. To the north of this site on the other side of the river is an area formerly occupied by chemical and iron works, which is also currently vacant. The eastern edge of the site closest to Staveley town centre is occupied by Mallinckrodt Chemical Works. To the north and west of the Mallinckrodt Chemical Works, south of the railway line, is another former landfill site that is soon to be subject to a landscaping scheme.

2.9. The AAP will allocate land use for the site, underpinned by a robust evidence base and masterplanning process. It has been recognised, however, that it is important to consider the

needs of the wider community surrounding the AAP boundary. Consequently, the AAP also takes into consideration, as appropriate, the immediate and wider context within which the study area sits.

Figure 2.1 Wider Context

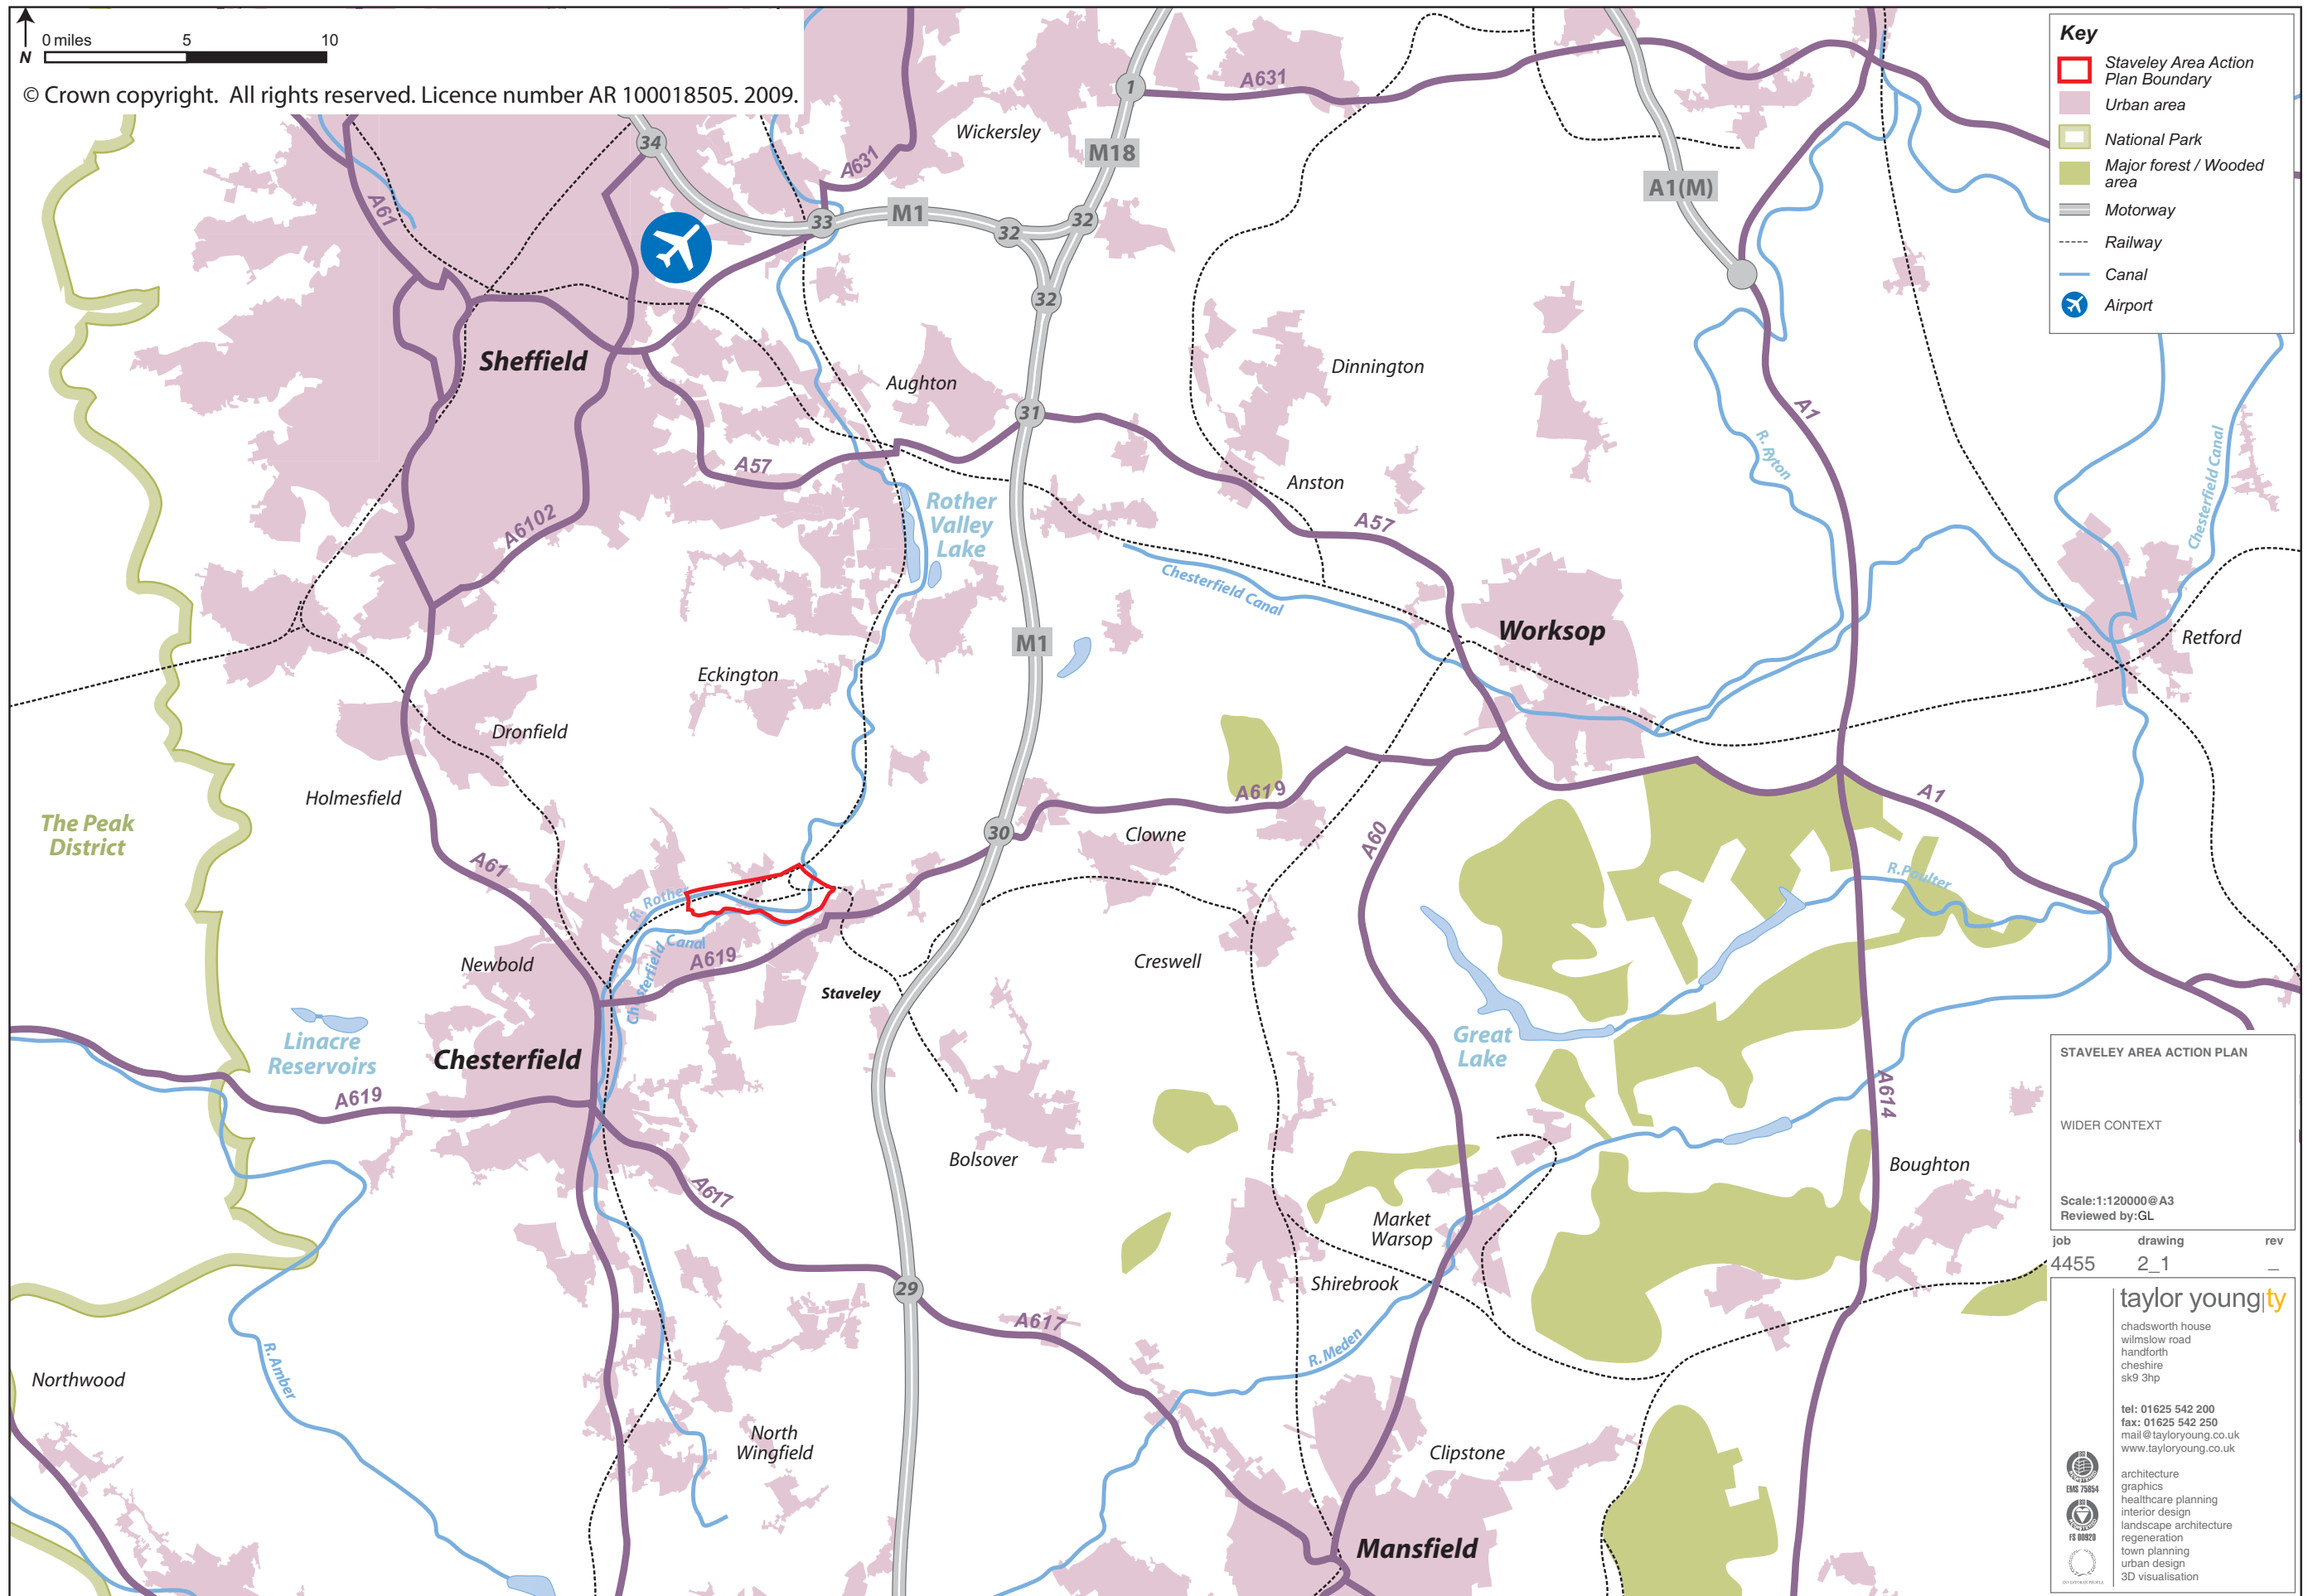

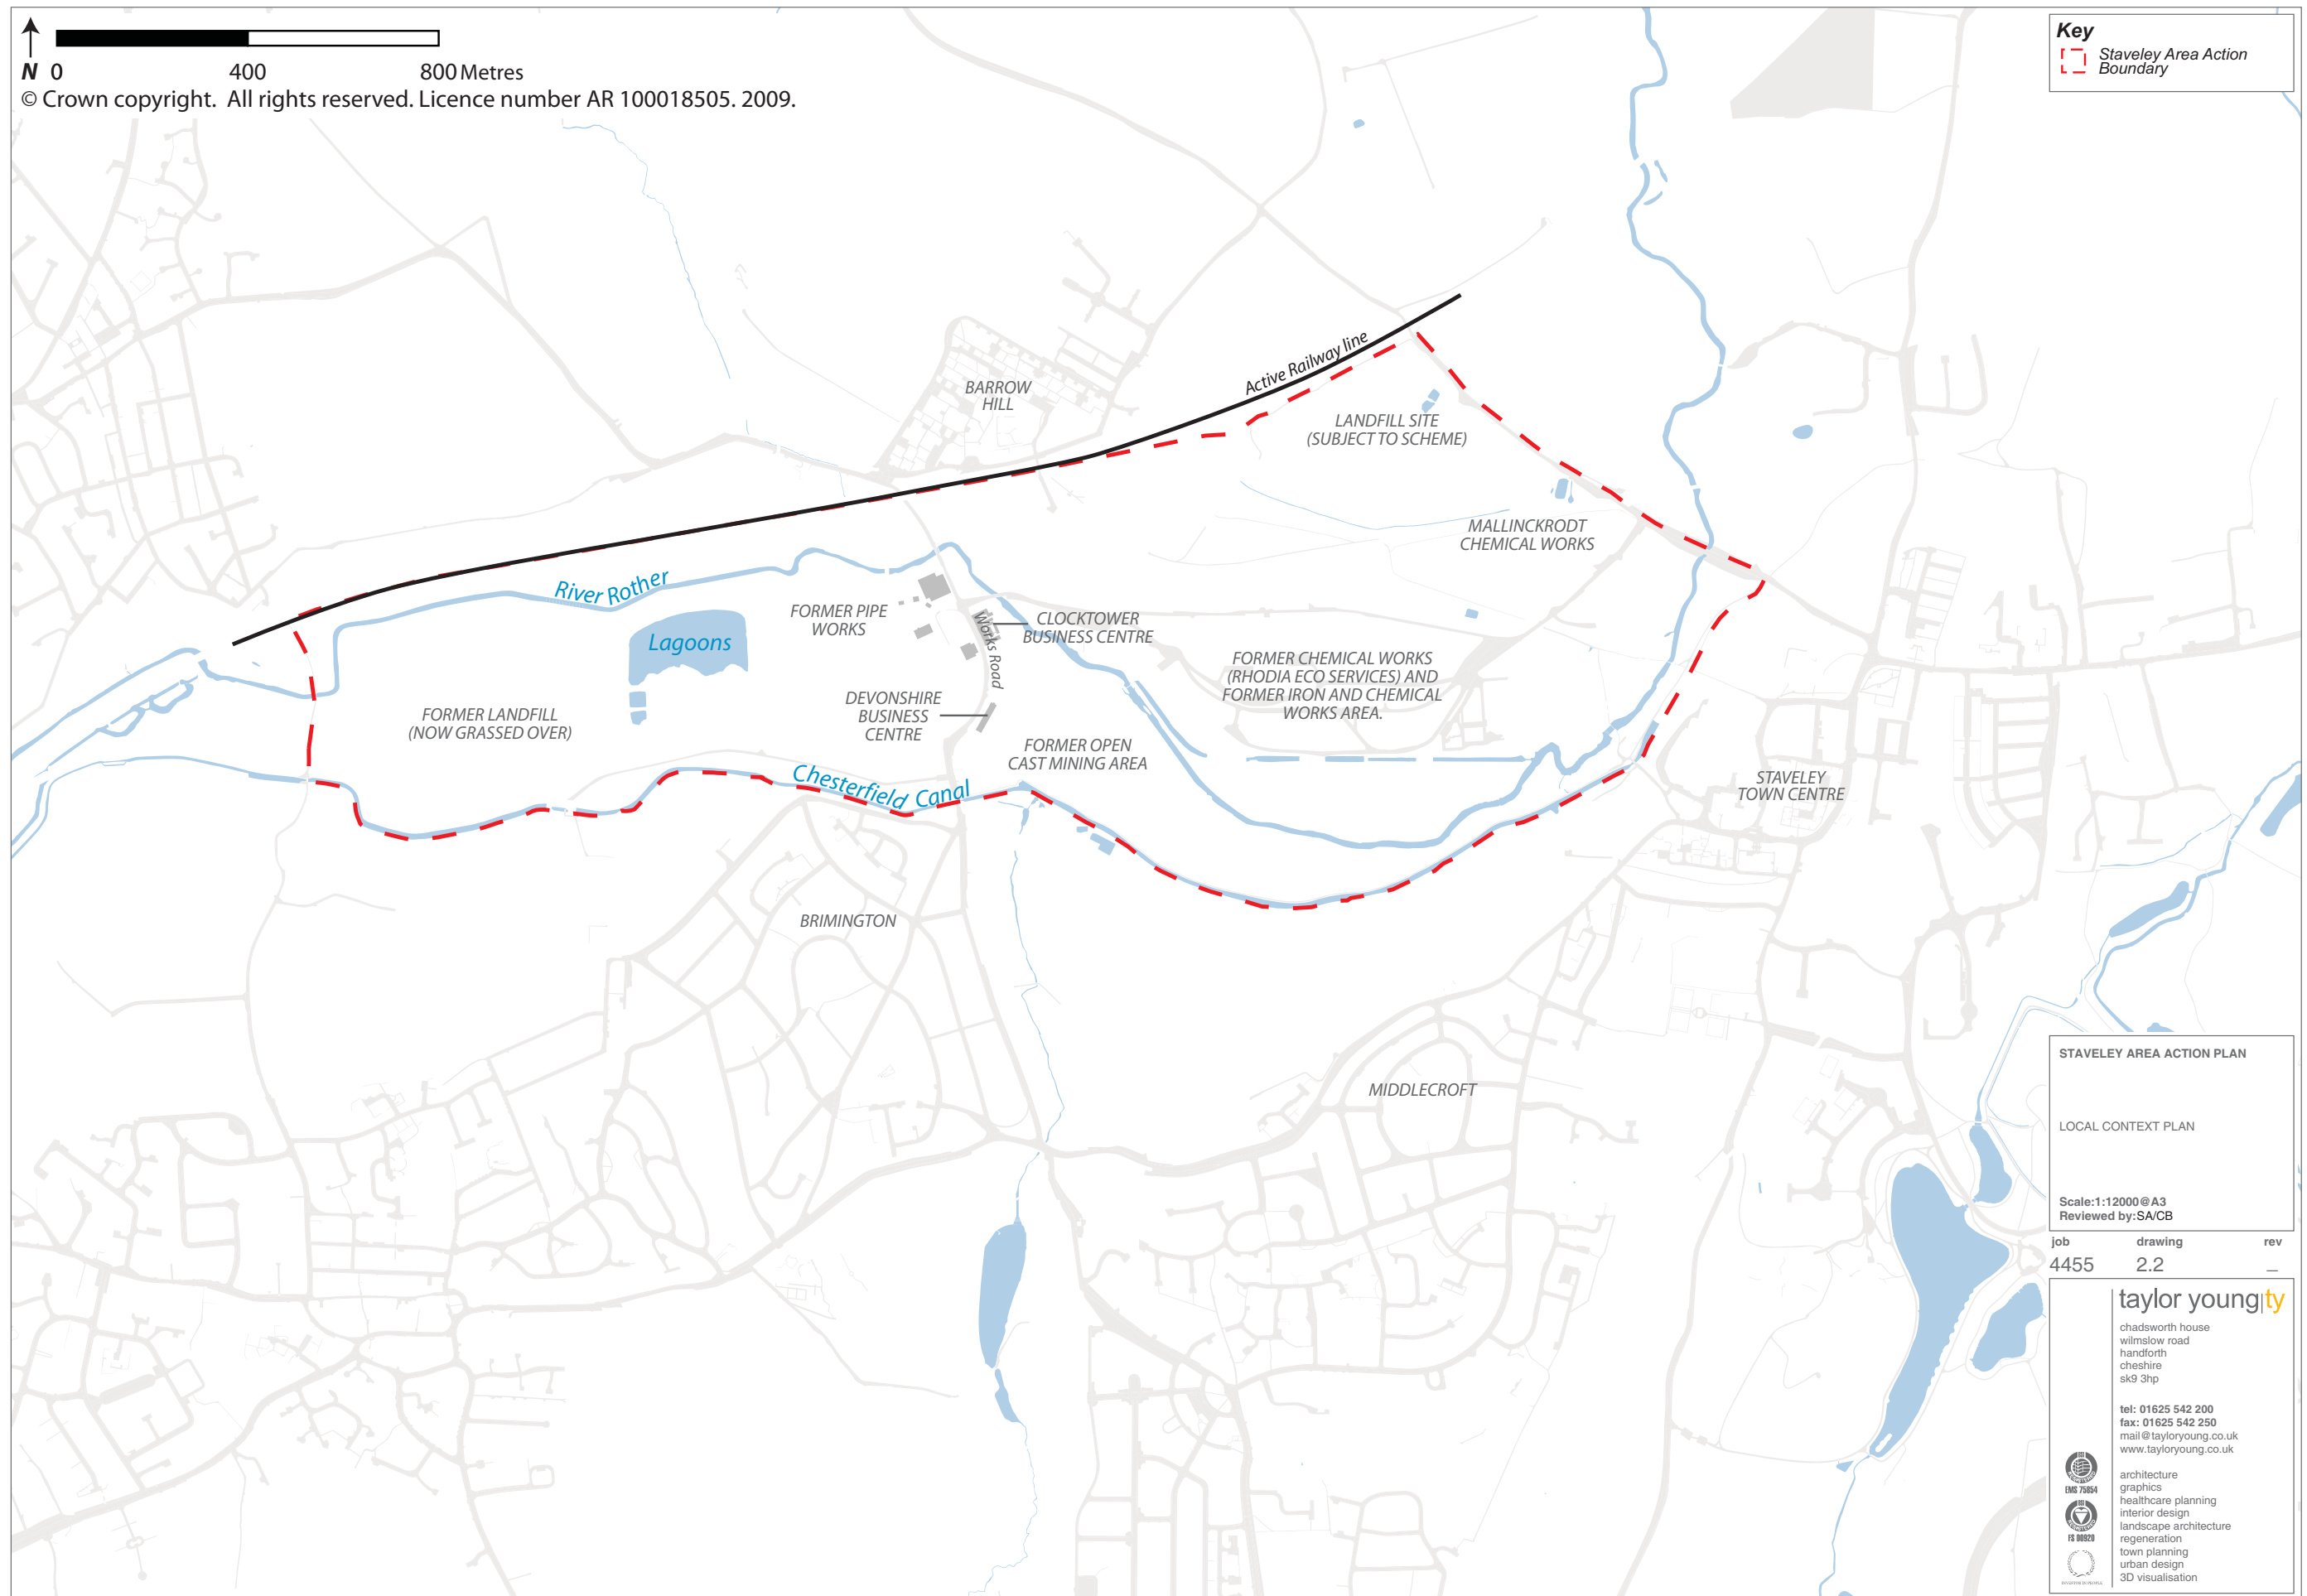

Figure 2.2 Study Area Boundary and Local Context

3. Identifying Relevant Policies, Plans and Programmes (Task A1)

- 3.1. Stage A of the SA process involves establishing the context in which the AAP is being prepared, i.e. the other policies, plans and programmes that influence the contents of the AAP (and vice versa) and the opportunities and challenges they present.
- 3.2. The Guidance on Sustainability Appraisal of Local Development Frameworks includes guidance on establishing the context:
- 3.3. *Once SA information and objectives have been developed for a LPA's first SA, subsequent SAs of other DPDs can also draw on this information. This applies particularly for Stage A of the process.*
- 3.4. The Chesterfield Core Strategy SA Scoping Report contains details of plans, strategies, guidance and legislation relevant to the Chesterfield Core Strategy. These documents range from international guidance and legislation at the highest level, through UK government policies and guidance, to corporate policies and strategies at the local level. They also include targets and objectives of regulatory and advisory organisations (for example the Environment Agency and Natural England). The list of policies, plans and programmes in the Chesterfield Core Strategy SA Scoping Report has been reviewed to ensure that superseded plans and programmes are updated, and to ensure the inclusion of any relevant plans and programmes not included in the Chesterfield Core Strategy Sustainability Appraisal Report in the Scoping Report for the Staveley AAP.
- 3.5. In line with the Chesterfield Core Strategy SA Scoping report the document review of relevant policies, plans and programmes is structured to show relevant international, national, regional and local policy documents. The Core Strategy SA also identifies relevant policy against the headings used to identify baseline data. These are as follows:
 - Air
 - Biodiversity
 - Climate change
 - Cultural heritage
 - Economic factors
 - Health
 - Housing
 - Landscape and townscape
 - Material assets
 - Population and diversity
 - Transport
 - Water
- 3.6. The main policies, plans and programmes relevant to the SA of the Staveley AAP are set out in Appendix 1. This will inform the development of the SA objectives and sub-objectives in the SA framework in Section 6 of this report. The review of policies, plans and programmes, in addition to other documents, will also provide information with regard to the environmental and sustainability problems relevant to the plan.

4. Baseline Review (Task A2)

4.1. The Guidance on Sustainability Appraisal of Local Development Frameworks includes guidance on establishing the baseline context:

- LPAs may already hold significant baseline data as part of the DPD process;
- The review of policies, plans and programmes will identify significant baseline data;
- Some baseline data included in the Core Strategy SA will be generic to the area and thus be used for this SA; and,
- Sufficient information about the current and likely future state of the area covered by the DPD needs to be collected to allow effects to be adequately predicted.

4.2. The baseline data collection has focused on the themes used for the Chesterfield Core Strategy SA. The baseline data presented has utilised the data included the Core Strategy SA Scoping Report and provided more detail in key areas to allow the effects of the AAP to be adequately predicted.

4.3. The baseline data for these themes is provided in Table 4.1, Figures 4.1 to 4.13 and Appendix 2,

Data limitations

4.4. Meaningful data for the purposes of comparison and to address the topics being assessed as part of this SA is not always available. Data gaps are identified in the baseline.

Collection of population statistics

4.5. Figure 4.4 shows the area covered by the data collected for population based statistics. As the Staveley site has no resident population, a wider area has to be considered. This area has been selected to include key areas for which the AAP seeks to promote specific benefits, including Staveley Town Centre, Barrow Hill, Hollingwood and Brimington.

Table 4.1 Baseline Data for the Staveley area

Theme	Data
Agriculture	Not applicable at this site.
Air	<p>The A619 is due to be subject of an Air Quality Management Area between Chesterfield and Staveley.</p> <p>While the site is currently occupied by industrial uses, they do not currently pose significant air pollution problems.</p>
Biodiversity, Flora and Fauna	<p>Figure 4.1 (Landscape and townscape plan) provides an overview of the habitats and ecology at the site. Potential habitats include woodland along the River Rother, wetland areas, unimproved grassland, flood plain, self set vegetation, the River Rother and the Chesterfield Canal.</p> <p>Figure 4.2 provides an overview of the ecological value of the site. It is based on two separate considerations: the classifications of habitat contained in the phase one habitat survey carried out by ECUS Ecology, and on the fact that retained habitat is more sustainable, more easily managed and better incorporated into a landscape framework if it is contiguous rather than fractured or dispersed. The plan shows that the areas of high ecological value are along the river, canal and railway corridors and associated with standing water bodies on the site.</p>
Climate change	<p>Climate change baseline is related to the amount of carbon the site contributes to the atmosphere. If the amount of carbon can be reduced this will help to mitigate climate change. It is also important to adapt to the inevitable effects of climate change such as higher summer temperatures, summer drought and more intense summer storms. In this context, it is important to understand the following on the site:</p> <p>Flood risk – The flood risk section below outlines the current flood risk owing to river flooding using the Environment Agency flood zones, and the extent of the 2007 floods, also mapped by the Environment Agency. Climate change is likely to increase an already prevalent flood risk in the area in terms of both frequency and extent. Surface water flooding will also potentially increase owing to climate change, although there has not been a historic surface water flooding problem in the area so it is difficult to identify the level of risk.</p> <p>Energy efficiency of buildings –There are very few buildings on the site. We cannot conclusively comment on the energy efficiency of the buildings but given their age it is unlikely they are highly energy efficient.</p> <p>Adaptability of buildings to change - There are very few buildings on the site. We cannot conclusively comment on the adaptability of the buildings but given their age it is unlikely they are highly adaptable to changes in temperature or increased flood risk.</p>

Theme	Data
Cultural heritage	<p>In relation to built form there are a few buildings and features within the site of particular interest that have the potential to strengthen the site's heritage. These are highlighted in Figure 4.3. Part of the site is included in the Barrow Hill Conservation Area, and there are the old industrial brick buildings along Works Road and the infrastructure which relate to them. The Clocktower also provides an important landmark within the site and is a listed building. The Chesterfield Canal is also an important feature of the area that represents its cultural heritage.</p>
Deprivation	<p>Figure 4.4 shows the area covered by the deprivation data collected.</p> <p>The full dataset for Index of Multiple Deprivation is in Table 1, Appendix 2. The results show that the area has varied levels of deprivation, ranging from 3 SOAs ranked in the worst 5-10%, 6 in the worst 10-25% and 11 SOAs ranked outside of the worst and best 25% ranges.</p> <p>The areas with the lowest rank (between 5-10%) for overall deprivation are Barrow Hill (3A), Middlecroft east (2E) and the area to the south of the town centre (2D). The areas with a rank ranging between 10 – 25% include Staveley Town Centre (2C), Middlecroft west (6E), Brimington (6D, 3D, 5E) and Old Whittington (1C).</p>
Economic factors	<p>Figure 4.4 shows the area covered by the deprivation data collected.</p> <p>A range of data has been considered to assess economic baseline, including population statistics - income deprivation, employment deprivation, education, skills and training deprivation and economic activity/inactivity; and property market data - public sector property enquiry analysis, marketed property supply, valuation office data, existing scheme performance and rental values. The full datasets for these themes are in Tables 1 - 13, Appendix 2.</p> <p>Income deprivation – 2 SOAs ranked in the worst 5-10%, 6 in the worst 10-25% and 12 SOAs ranked outside of the worst and best 25% ranges. The areas with the lowest rank (between 5-10%) are Barrow Hill (3A) and Middlecroft east (2E). The areas with a rank ranging between 10 – 25% include south of the Town Centre (2D), Staveley Town Centre (2C), Middlecroft west (6E), Brimington (3D, 5E) and Old Whittington (1C).</p> <p>Employment deprivation – 2 SOAs ranked in the worst 2-5%, 5 SOAs ranked in the worst 5-10%, 6 in the worst 10-25% and 8 SOAs ranked outside of the worst and best 25% ranges. The areas with the lowest rank (between 2- 5%) are south of the Town Centre (2C) and Barrow Hill (3A). Middlecroft east (2E), Staveley Town Centre (2C), Middlecroft West (6E) and Old Whittington (1C) are within the worst 5-10%. The areas with a rank ranging between 10 – 25% include Brimington (6D, 3D, 3C, 5E), Inkersall north (6B) and Inkersall south (6C).</p> <p>Education, skills and training deprivation - 2 SOAs ranked in the worst 2-5%, 10 in the worst 10-25% and 8 SOAs ranked outside of the worst and best 25% ranges. Middlecroft east (2E) and Old Whittington (1C) are ranked in the lowest 2-5% and Barrow Hill (3A), south of the town centre (2D), Staveley Town Centre (2C), Middlecroft West (6E), Brimington (6D, 3D, 5E), Inkersall north (6B), New Whittington (1A, 1B) are ranked in the worst 10 - 25%.</p>

Theme	Data
	<p>Economic activity – the proportion of the economically active population in employment or full time education varies from 43.4% to 68.3%, with an average of 57.9%. There are a number of SOAs that have low economic activity including Staveley Town Centre (2C) - 51.5%, Inkersall north (6B) - 52.4%, Barrow Hill (3A) – 51.4%, Middlecroft east (2E) – 46.5%, Middlecroft west (6E) – 48.7%, south of the Town Centre (2D) – 48.6%, Old Whittington (1C) – 43.4%.</p> <p>Economic inactivity - the proportion of the economically active population unemployed varies from 2.17% to 9.98%, with an average of 5.1%. There are a number of SOAs that have high unemployment including Brimington (3C) – 6.69%, Barrow Hill (3A) – 8.22%, Middlecroft east (2E) – 9.39%, south of the Town Centre (2D) – 9.98%, Old Whittington (1C) – 7.94%.</p> <p>Property market – Enquiries to Chesterfield Borough Council (CBC) for property/land, shows that interest in industrial land has dropped since 2004, while enquiries for offices have remained the same. There has been a relatively high number of enquires in the first 2 months of 2009 compared to the last few years. Enquiries seem to be for smaller rather than larger premises.</p> <p>In terms of marketed industrial property the data shows there are many small-scale properties and few large scale, with more sites concentrated at 3/4 locations. In terms of quality, the majority of industrial premises are classed as moderate, followed by good/new and the least number classed as budget.</p> <p>In terms of marketed office floor space the data shows there are many medium-scale properties providing most floor space, but small scale provides the most individual properties. The most office premises are found in Chesterfield Town Centre followed by 3 other centres, including Staveley Town Centre. In terms of quality, the majority of office premises are classed as moderate followed by good/new and the least number classed as budget.</p> <p>In terms of rental values the highest rents are achieved for good quality premises and serviced/managed work space. Budget accommodation yields the lowest rents. Town centre rents are not necessarily the highest.</p>
Flood risk	<p>River flooding</p> <p>The Environment Agency flood zones for the River Rother are illustrated in Figures 5.5. This figure also illustrates the 2007 flood extent mapped by the Environment Agency. If the Environment Agency uses this extent to inform their flood zone revisions then a significant area of the site will be considered at risk of flooding. The baseline studies to support the Staveley AAP suggest, however, that the Environment Agency map is incorrect as it identifies areas of land that are clearly many meters above the river and other areas of land that did not flood. Until this is clarified, this SA will have to be based on the information available. The site is currently largely vacant, thus there is little development at risk. It is important to note, however, that Works Road, Clocktower Business Centre and Devonshire Business Centre are in Flood Zone 2.</p> <p>Groundwater Flooding</p> <p>Low-level groundwater flooding is known to be a historical problem in the north eastern part of the site at the base of the raised ground behind the</p>

Theme	Data
	<p>remaining chemical works on the Rhodia site. Groundwater floods a small area of the former footpath, and drains into the River Rother via an existing drain at this location.</p> <p>Flooding from Overland Flow There are no known instances of flooding from excessive overland flows on site.</p> <p>Flooding from Artificial Sources The Ringwood Lake lies approximately 1km away from the site. Further investigation will be needed to assess the consequences of a breach of the dam embankment.</p> <p>Land Drainage Flooding The site has been developed for a number of years with no reported instances of flooding. Furthermore, there are no known land drains in or near to the site. The risk of flooding on site from land drainage is considered to be low and acceptable.</p>
Health deprivation	<p>Figure 4.4 shows the area covered by the data collected for the SOA based health data. The full datasets for these themes are in Tables 1 and 14, Appendix 2.</p> <p>Health deprivation – 6 SOAs ranked in the worst 5-10%, 6 in the worst 10-25% and 8 SOAs ranked outside of the worst and best 25% ranges. The SOAs ranked in the worst 5-10% include Barrow Hill (3A), Staveley Town Centre (2C), south of the Town Centre (2D), Middlecroft west (6E), Old Whittington (1C).and Middlecroft east (2E). The areas with a rank ranging between 10 – 25% include Brimington (3D, 3C, 5E, 5C 6D) and Inkersall north (6B).</p> <p>General health – On average the large majority of the populations across the SOAs consider themselves to be in good health (60.4%) with a further significant proportion considering themselves to be in fairly good health (26.4%). 13.3% consider themselves to be in bad health. In terms of variation around the average, most SOAs are within 3-4% of the average for both good health and bad health. There are some 'hot spots' of poor health including Staveley Town Centre (2C) – 16.9%, Brimington (5E, 5C) – 14.9%/15.6%, south of the Town Centre (2D) – 16.6%, Middlecroft west (6E) 16.5%, Old Whittington (1C) – 16.8% and Middlecroft east (2E) - 14.6%.</p>
Housing	<p>Figure 4.4 shows the area covered by the tenure data collected for the SOA based housing data. The full datasets for these themes are in Tables 15 – 17, Appendix 2.</p> <p>Tenure – 57.32% of the households across the SOAs on average own outright or own with a mortgage. This is below the Chesterfield, regional and national averages. There is significant variations with outright ownership/mortgage ranging from as low as 15 -20% to as high as 80 -85%. The areas with low home ownership are Barrow Hill (3A), Staveley Town Centre (2C) south of the Town Centre (2D), Middlecroft east (2E), Brimington (5E) and Old Whittington (5E).</p> <p>30.33% of households rent their home from the council, a Housing Association or Registered Social Landlord. This is above the Chesterfield, regional and national averages. Again, there is significant variation, from as</p>

Theme	Data
	<p>low as around 6% to as high as 76%. Private renting average is 5.02%, with a range of less than 1% to as high as 15.93%. This is lower than the Chesterfield, regional and national averages. In terms of social renting, the areas with the highest proportions include Barrow Hill (3A), Staveley Town Centre (2C) south of the Town Centre (2D), Middlecroft west (6E) Middlecroft east (2E), Brimington (5E) and Old Whittington (5E).</p> <p>Residential values for postcode area S43 show average house price is £127,840. This is below the Chesterfield and regional average.</p>
<p>Landscape and townscape</p>	<p>Figure 4.1 illustrates the spatial distribution of land uses.</p> <p>The site is predominantly open with varying landscape characters. Some areas have a strong green character with dense vegetation while others are vacant as a result of recent demolition of industrial areas. A small portion of the site still retains its industrial character.</p> <p>Three strong spatial elements which have a strong influence on the site's character are worth noting, these being: the railways lines and sidings; the Chesterfield Canal and the River Rother.</p> <p>In relation to urban form there is not much development on the site except for the old industrial buildings along Works Road, which could be considered for re-use as a means to strengthening the industrial heritage of the site. With regard to the site's surroundings, they are villages and towns which are predominantly residential in character with small local centres providing facilities. Staveley Town Centre provides the main urban node with a mix of uses.</p> <p>In July 2008 CBC produced a Landscape Character and Green Infrastructure framework accompanied by two plans: Landscape Assets and Opportunities and a concept layout. The following is a summary of the main points:</p> <ul style="list-style-type: none"> • The majority of the site lies within the Nottingham, Derbyshire and South Yorkshire Joint Character Area • The site lies predominantly with the "Riverside Meadows" landscape character type • The site is bounded to the north by "Estates Farmland" <p>The following is a summary of the particular Landscape Assets noted:</p> <ul style="list-style-type: none"> • Woodland along the River Rother • Wetland areas • Unimproved grassland • Flood plain • Large areas of "self set" vegetation • River Rother and Chesterfield Canal are landscape, biodiversity and recreational assets • Significant industrial heritage • Neighbouring local wildlife sites • Existing woodland cover and imminent woodland planting is noted at: <ul style="list-style-type: none"> ○ The former Dixon open cast site ○ Screen planting at the north, west and south of the Pipeworks lagoon ○ The former Fitzwise open cast site

Theme	Data
	<ul style="list-style-type: none"> ○ Hall Lane waste disposal site ○ Mill Green gas works
Material assets	<p>The material assets within the study area are land, buildings and infrastructure at the site.</p> <p>Land - Table 18 and Figures 5.7 and 5.8 provide an overview of the contamination at the site. It identifies several contaminated or likely contaminated sites, across the study area. This includes areas formerly used for landfill, colliery tips, heavy rail, iron works, mills, open cast workings, sewage tanks, pipe works, PVC powder warehouse, chemical works and tips. The current industrial land uses may also be the cause of contamination, although more stringent regulations means contaminated land has to be remediated to an acceptable standard.</p> <p>There is potential for ground gas associated with Made Ground, as well as ground instability issues.</p> <p>Buildings – There are few buildings on the site, but those that do exist are mainly industrial (Mallinckrodt Chemical Works), in addition there are a number of office buildings on the site (Clocktower Business Centre, Devonshire Business Centre). Industrial buildings in particular have a specific function lifetime, with more flexibility in terms of the users of the office buildings.</p> <p>Infrastructure - Transport infrastructure within the site is poor, but has good potential in terms of improving access for vehicles, by train, cycle and pedestrians. See Transport/accessibility section below.</p> <p>Community facilities – Figures 5.9 and 5.10 plot the location of basic community facilities such as leisure facilities, primary schools, secondary schools, GPs, health centres, dentists, libraries and post offices, and plot 400m and 800m catchments of the facilities. The plan shows that the study area on the whole is not within 400m of existing community facilities and that accessibility to facilities within 800m diminishes towards the west of the site, further away from Staveley Town Centre. While the area could benefit from facilities at Barrow Hill and Brimington, there are substantially fewer facilities here compared to Staveley Town Centre.</p>
Population and ethnicity	<p>Figure 4.4 shows the area covered by the tenure data collected for the SOA based population and ethnicity data. The full datasets for these themes are in Tables 19 and 20, Appendix 2.</p> <p>The age profile shows the majority of the population is over 30 years old (about 65%) with over 20% of the population at retirement age or older. 19% of the population is under 16. There is significant spatial variation, with some areas having a relatively young population and others having a relatively high older population. Areas with young population include Middlecroft east (2E) – 30.3%, Middlecroft west (6E) – 21.1%, Hollingwood (3E) – 23.3%, Barrow Hill (3A) -21.9% and Brimington (6D) – 22%. Areas with an older population including east of the Town Centre (2B) – 26.5%, Brimington (5C) - 36.4%, Inkersall south (6C) – 26%, Inkersall north (6B) – 24.4% and Old Whittington (1E) – 26.9%.</p> <p>In terms of ethnicity the population is classed as predominantly white with very small proportions of Asian, Chinese, Black and Mixed race people. The data shows a relatively constant picture for the area with little variation.</p>

Theme	Data
Transport/ Accessibility	<p>Strategic context (Figure 4.10) Staveley is well placed on the strategic road network with improved connections to the M1 currently under construction in the form of the Staveley Northern loop road, which forms part of the wider connection between the A619 and new junction 29A on the M1.</p> <p>The site is near to the Midland Mainline and is connected to this railway via an in-use freight line passing to the north of the town. A spur of disused rail runs from this through the town centre and continues east.</p> <p>The area has great potential in terms of connectivity, with road, rail, and canal links all in place or under construction. However, much of the site is still unserved by the existing road network and by the lack of direct passenger rail.</p> <p>Local Context (Figure 4.11) The site is highly industrial in nature although most of the former industry has vacated the area. The site is surrounded by settlement but very few road connections lead through the area itself.</p> <p>The area is well served by the existing rail with direct connectivity to Chesterfield and the Midland Mainline. However, these are exclusively used for freight or disused completely at present, with no passenger operations;</p> <p>The Chesterfield Canal provides a pleasant walking and cycling context for the Transpennine Trail and further improvement work is planned. Other footpaths exist but these are heavily localised in certain areas and not evenly distributed throughout the site.</p> <p>The rail lines, Chesterfield Canal, and large vacant site provide a barrier for easy movement around the site.</p> <p>Public transport (Figure 4.12) Public Transport penetration into the site is poor with only one regular bus service performing a local role in connecting Brimington and Barrow Hill with Chesterfield and Staveley. As such, journeys are circuitous, and journey times are correspondingly long between the site and the main local centres.</p> <p>Walking and cycling (Figure 4.11) Walking and Cycling routes within the site are mostly provided along the Chesterfield Canal alignment as a result of the Transpennine Trail. Whilst this route is of a high quality and is well used (with future enhancement of the canal corridor expected), there is little other walking and cycling provision within the site itself, especially towards the western side where footpaths skirt the perimeter of the site.</p> <p>Congestion Overtrafficking problems on the A619 currently exist with the majority of the route between Staveley and Chesterfield denoted as an Air Quality Management Area. In addition, the junctions at the Chesterfield end of this</p>

Theme	Data
	route are approaching capacity and may act as a development constraint in the near future.
Water	<p>Actual groundwater levels are unknown, but could exist perched in the Made Ground or Alluvial deposits that are thought to exist across the site. The Carboniferous Coal Measures underlying the site are classified as a Minor Aquifer.</p> <p>There is also the potential for groundwater rebound following the cessation of deep underground coal workings and opencast workings.</p>

5. Identifying Sustainability Issues and Problems (Task A3)

5.1. SA requires that economic, social and environmental issues should be assessed:

5.2. *The identification of sustainability issues (including environmental issues as required by the SEA Directive) is an opportunity to define key issues for the DPD and develop sustainable plan alternatives and options.*

5.3. The guidance goes on to state:

5.4. *Any issues identified need to be linked to evidence by reference to baseline information and the identification of historical or likely future trends.*

5.5. The Chesterfield Core Strategy SA identifies a number of key sustainability issues and opportunities. Not all of these issues are relevant to the Staveley AAP and clearly address a larger scale area than the AAP boundary, nevertheless it provides a useful basis for identifying key sustainability issues for the AAP. While the Chesterfield Core Strategy Sustainability Appraisal provides a range of themes to focus the assessment of sustainability issues in the AAP area, the Staveley AAP Baseline Report has been the source of many of the sustainability issues identified.

5.6. Table 5.1 below outlines the main sustainability issues that have been identified and a list of possible indicators to measure the impact of the Staveley AAP on the identified issue.

Table 5.1 Sustainability Issues

Theme	Key sustainability issues	Source
Agriculture	N/A	Baseline information
Air	<p>The A619 is due to be subject of an Air Quality Management Area between Chesterfield and Staveley which should improve air quality along this route</p> <p>Air pollution should be managed through inventive measures such as green infrastructure (e.g. Living Willow fences).</p>	<p>Baseline information</p> <p>SA Group</p>
Biodiversity, Flora and Fauna	<p>Many parts of the site have been undisturbed for many years, thus they have become good habitats for ecology.</p> <p>The canal and river corridor are particularly rich in biodiversity.</p> <p>Green links to the surrounding areas should be made.</p> <p>Lakes provide angling opportunities.</p> <p>Gardens can provide for biodiversity if of appropriate size and nature.</p> <p>Woodland and wetlands can also be put to better use in terms of biodiversity.</p> <p>Bio remediate soils.</p> <p>Chesterfield Greenprint identifies a number of species and habitats present in the study area.</p>	<p>Baseline information</p> <p>SA Group</p> <p>SA Group</p> <p>SA Group</p> <p>SA Group</p> <p>SA Group</p> <p>SA Group</p> <p>SA Group</p>
Climate change	<p>The area floods extensively according to the Environment Agency (EA) map of the 2007 floods. This will have serious implications for the sustainability of development in the area. It should be noted that the baseline report for the Staveley AAP has found this map to be incorrect, and appropriate discussions with the EA will follow.</p> <p>There are few buildings on the site, but those that remain are several decades old and unlikely to be energy efficient or adaptable to the challenges of climate change, such as increased flood risk and higher summer temperatures.</p> <p>Opportunities to adapt to climate change should be included – green roofs, SUDS, optimal green infrastructure, green infrastructure that can adapt to climate change and low carbon transport (walking, cycling).</p>	<p>Baseline information</p> <p>Baseline information</p> <p>SA Group</p>
Cultural heritage	<p>There are a number of heritage features in the area specifically related to industrial heritage, including the Chesterfield Canal, and industrial buildings on Works Road.</p> <p>Seek to preserve and adapt former industrial building to bring them into use.</p>	<p>Baseline information</p> <p>SA Group</p>

Theme	Key sustainability issues	Source
	<p>Areas of unexplored archeology need to be investigated.</p> <p>Reflecting history in future development – naming of buildings, streets, parks etc.</p> <p>Restoration is expensive – use new development to fund restoration.</p> <p>Historic topography is important and should be restored.</p> <p>Links to Model Village of Hollingwood and Barrow Hill Parker Unwin, Richard Barrow social visionary should be made stronger culturally and physically.</p> <p>Links to the canal at Brindley could be made.</p> <p>Close to Barrow Hill Round House and Conservation Area.</p>	<p>SA Group</p> <p>SA Group</p> <p>SA Group</p> <p>SA Group</p> <p>SA Group</p> <p>SA Group</p> <p>SA Group</p>
Deprivation	Overall deprivation, assessed through combined Index of Multiple Deprivation (IMD), is not a major issue across the area although the area includes 3 SOAs ranked within the worst 5-10% in England - Barrow Hill (3A), Middlecroft east (2E) and the area to the south of the town centre (2D).	Baseline information
Economic factors	<p>Employment deprivation, assessed as part of IMD, includes the highest ranked SOAs in the area including south of the Town Centre (2D) and Barrow Hill (3A) in the 2- 5%. Middlecroft east (2E), Staveley Town Centre (2C), Middlecroft West (6E) and Old Whittington (1C) are within the worst 5-10%.</p> <p>Education and skills deprivation , assessed as part of IMD, also includes the highest ranked SOAs in the area including Middlecroft east (2E) and Old Whittington (1C) which are ranked in the lowest 2-5%.</p> <p>Income deprivation, assessed as part of IMD, includes 2 SOAs ranked within the worst 5-10% in England - Barrow Hill (3A) and Middlecroft east (2E).</p> <p>A number of areas show low economic activity and high unemployment, including Barrow Hill (3A), Middlecroft east (2E) south of the Town Centre (2D) and Old Whittington (1C).</p> <p>Enquiries for property in Chesterfield have been stable for offices and decreasing for industrial premises/land. There is strong competition from a number of key locations in the Chesterfield area.</p> <p>Seek to promote new educational facilities if can be supported by local population.</p> <p>Retail, office and starter units and live work units.</p>	<p>Baseline information</p> <p>Baseline information</p> <p>Baseline information</p> <p>Baseline information</p> <p>Baseline information</p> <p>SA Group</p> <p>SA Group</p>

Theme	Key sustainability issues	Source
	Local centre to promote entrepreneurialism, learning, training and business support.	SA Group
Health	Health deprivation, assessed a part of IMD, shows that Barrow Hill (3A), Staveley Town Centre (2C), south of the Town Centre (2D), Middlecroft west (6E), Old Whittington (1C) and Middlecroft east (2E) are ranked in the worst 5 – 10% of SOAs.	Baseline information
	In terms of general health, there are some ‘hot spots’ of poor health including Staveley Town Centre (2C), Brimington (5E, 5C), south of the Town Centre (2D), Middlecroft west (6E), Old Whittington (1C) and Middlecroft east (2E).	Baseline information
	Use nature of the location to promote healthy living – green gyms, woodland, cycle ways, pedestrian pathways, formal open spaces, multifunctional areas including children and youth facilities, allotments, orchards, urban farm (could be linked to Farmers Market in Staveley).	SA Group
	Lack of local health facilities – should be provided.	SA Group
Housing	Barrow Hill (3A), Staveley Town Centre (2C) south of the Town Centre (2D), Middlecroft west (6E) Middlecroft east (2E), Brimington (5E) and Old Whittington (5E) have relatively low levels of home ownership and high levels of social renting. More diverse tenure mix could benefit the area as a whole.	Baseline information/SA Group
	Desire for more aspirational housing types with large gardens.	SA Group
	Use of non traditional methods and materials for buildings to maximise carbon fixing. Eco housing and promotion of Zero Carbon.	SA Group
	Use the canals and lakes at the site to create attractive residential environments. Use of boats and moorings.	SA Group
	Future proofing against future flood risk.	SA Group
	Safe and secure environment – achieve Secured By Design principles.	SA Group
	Self build plots	SA Group
	Lifetime homes	SA Group
Garages big enough for cars	SA Group	
Landscape and townscape	The site is regarded for some of its landscape assets including the River Rother, Chesterfield Canal and areas of woodland. There are, however, large areas of derelict land and some industrial buildings that detract from the landscape quality of the area.	Baseline information

Theme	Key sustainability issues	Source
	Landscape is important in making links to Barrow Hill.	SA Group
Material assets	<p>A significant amount of the land in the AAP boundary has restricted use owing to contamination and/or land stability issues that will require remediation measures to make the land developable.</p> <p>There are few buildings on the site and most are specific to industrial uses and thus not adaptable to other uses.</p> <p>The site does not include any community facilities, relying on the facilities in surrounding centres. This means many areas of the site are poorly served in terms of community facilities within walking distance.</p> <p>The local area should be the primary source for materials, where possible.</p> <p>Use of renewables should be explored.</p> <p>Local population should be involved in regeneration – jobs and training.</p> <p>Plan for recycling for all users.</p>	<p>Baseline information</p> <p>Baseline information</p> <p>Baseline information</p>
Population and diversity	<p>The majority of the population surrounding the AAP area is over 30 years old, with on average over 20% of the population at retirement age or older. There is significant spatial variation with some areas having a relatively young population and others having a relatively high older population, in particular Middlecroft east with a large young population and part of Brimington (5C) with a large older population.</p> <p>The population in and around the AAP boundary is predominantly white with little variation between the SOAs.</p> <p>Need to redress imbalance of class and age types within Staveley.</p> <p>Need to for community rooms and spaces.</p> <p>Internet connections - high speed and free Wi Fi spots.</p>	<p>Baseline information</p> <p>Baseline information</p> <p>SA Group</p> <p>SA Group</p> <p>SA Group</p>
Transport/ Accessibility	<p>In terms of transport infrastructure, strategically the site is well served but locally access is very poor. However, the Chesterfield Canal Corridor acts as a good transport link for cyclists and pedestrians.</p> <p>'The Staveley Northern loop road which forms part of the wider connection between the A619 and new junction 29A on the M1 is due to be completed in 2012. Phase I is under construction with Phase II to commence shortly A separate, historic proposal for the Chesterfield-Staveley Regeneration route between the A61 in Chesterfield and Junction 30 of the M1 is identified in DCCs Local Transport Plan but this does not have a project timetable or funding.</p>	<p>Baseline information</p> <p>Baseline information</p>

Theme	Key sustainability issues	Source
	<p>There is potential for the reopening of the Chesterfield railway line to the north of the site – this should be accommodated.</p> <p>Improve transport links to wider area, particularly Barrow Hill – currently poor.</p>	<p>SA Group</p> <p>SA Group</p>
Water	Disturbance of contaminated land on the site could result in leeching into minor aquifers in the ground in and around the AAP boundary.	Baseline information

6. Sustainability Appraisal Framework (Task A4)

- 6.1. The SA Framework provides a way in which sustainability effects can be described, analysed and compared. The SA Framework for the Chesterfield Core Strategy SA Scoping Report consists of sustainability objectives which, where practicable, may be expressed in the form of targets, the achievement of which is measurable using indicators. Objectives and indicators can be revised as baseline information is collected and sustainability issues and problems are identified, and can be used in monitoring the implementation of the plan. To expand on the central focus of each Objective (as they are high-level and potentially open-ended) the SA Framework includes a series of decision-making criteria which are questions for use when applying the SA Framework to the assessment of the DPD.
- 6.2. For the purposes of the Staveley AAP, the SA objectives, decision making criteria, indicators and targets have been reviewed to ensure they are applicable to the scope of the AAP.
- 6.3. In Table 6.1 the SA Framework that will be used to appraise the AAP is provided. The SA Framework will be used to appraise the AAP objectives and options in Stage B of the Sustainability Appraisal process.

Table 6.1 SA Framework

	SA/SEA Topic	SA Objective	Decision making criteria		Indicators	Targets
1	Housing (Material assets and Population)	To ensure that housing stock meets the needs of all communities in the Borough.	1a	Will it ensure all groups have access to decent, appropriate and affordable housing?	Local housing needs: <ul style="list-style-type: none"> ○ Tenure ○ Affordability 	Set by Housing Needs Survey Set by Housing Needs Survey
			1b	Will it ensure that all new development contributes to local distinctiveness and improves the local environment?	Housing density Design guidance	Housing density Produce design guide/principles
			1c	Will it reduce the amount of vacant land?	% of housing development on brownfield land	92% (Chesterfield AMR)
2	Health (Human Health and Population)	To improve health and reduce health inequalities.	2a	Will it improve access for all to health facilities?	Distance to nearest health centre	Proportion of population within 800m of a health centre
			2b	Will it provide sufficient areas of open space for all?	Distance to nearest open space	Local park within 600m Large park within 4000m
			2c	Will it encourage healthy and active lifestyles?	Multifunctionality of open space	Open spaces that accommodate a range of uses
			2d	Will it address 'hot spots' of poor health including at Barrow Hill, Staveley Town Centre, Middlecroft and Old Whittington?	Heath provision described in 2a, 2b and 2c has been improved for these areas.	Improvement of heath provision described in 2a, 2b and 2c.
			2e	Will it encourage walking and cycling?	Provision of cycle and pedestrian routes Design guide principles to encourage attractive and safe environment for pedestrians and cyclists and cycle storage	
3	Equality and Social Inclusion (Population)	To create sustainable communities.	3a	Will it reduce out migration?	New residential development	Meeting RSS target for housing of 6,800 dwellings by 2026 (480 per year)
			3b	Will it enable communities to influence decisions in their local	Extent to which community opinion has influenced the AAP	

	SA/SEA Topic	SA Objective	Decision making criteria		Indicators	Targets
				area?		
			3c	Will it ensure good access to education facilities?	Distance to nearest education facilities	Proportion of population within 500m of a primary school Proportion of population within 1000m of a secondary school
4	Heritage (Cultural Heritage)	To protect and manage the cultural heritage of the Borough.	4a	Will it protect, enhance and manage the local character and accessibility of the landscape across the Borough?	Number of heritage buildings and features enhanced Measures to improve access to the built environment landscape, e.g. new pathways and visitor centres	
			4b	Will it protect and enhance the character of the built environment?	Number of heritage buildings enhanced	Retain and enhance all identified heritage assets
5	Biodiversity (Biodiversity, Flora and Fauna)	To protect and enhance biodiversity.	5a	Will it lead to habitat creation matching BAP priorities?	Area of habitat creation matching BAP priorities	Area of new habitat created in BAP categories
			5b	Will it maintain and enhance sites designated for their nature biodiversity interest?	Area of designated sites maintained and enhanced	Area covered by management agreements/plans
			5c	Will it retain and enhance identified areas of ecological value?	Area of land classed as high ecological value that is maintained and enhanced	Change in area of land classed as high ecological value
6	Landscape (Landscape)	Protect and manage the landscape and townscape of Chesterfield.	6a	Will it reduce the amount of derelict, degraded and under-used land?	Proportion of land that is derelict	50% of new floorspace should be developed on previously developed land. (Chesterfield AMR) 92% of new and converted dwellings should be built on previously developed land. (Chesterfield AMR)

	SA/SEA Topic	SA Objective	Decision making criteria		Indicators	Targets
			6b	Will it protect and improve the distinctive local character of the Borough (such as stone walls)?	Protection and enhancement of industrial heritage features such as the canal and industrial buildings	Design guidance/principles in place
			6c	Will it provide adequate green space and environmental capital (green infrastructure)?	Area of Green Space per 1,000 population	Greenspace compared to standards set out in LDF
7	Use of resources (Material assets, Soil, Water)	To manage prudently the natural resources of the region including water, air quality, soil and minerals.	7a	Will it lead to reduced consumption of materials and resources?	Design guide principles to minimise materials and resource consumption, including reuse and recycling of existing materials.	
			7b	Does it have the potential to reduce water and energy consumption?	Design guide principles to minimise energy and water consumption	
			7c	Will it encourage energy production from sustainable sources?	Percentage of energy produced from sustainable sources	Increase generation from renewable energy sources to 10% by 2010 (Chesterfield AMR)
			7d	Will it maintain and enhance soil quality?	Area of contaminated land (ha)	
8	Climate Change Adaptation (Climatic effects)	Plan for the anticipated different levels of climate change.	8a	Will it be built outside of the floodplain?	Percentage of new development on floodplain	No planning permissions granted contrary to the advice of the Environment Agency (Chesterfield AMR)
			8b	Will development exacerbate flooding in any way?	Proportion of impervious hardstanding compared to current Number of SUDs systems/ area permeable paving	Surface water run-off rate of development (CBC likely to set target in Core Strategy)
			8c	Will it facilitate landscape change for climate change adaptation e.g. by protecting key landscape and biodiversity features and improving	Creation of green networks Retention of existing green infrastructure	

	SA/SEA Topic	SA Objective	Decision making criteria		Indicators	Targets
				links between them to reduce fragmentation?		
			8d	Will it promote urban cooling through the use of blue and green infrastructure and building design principles?	Inclusion of well distributed green infrastructure Design guide principles to promote buildings that can cope with high external temperatures	Design guidance/principles in place Area of new green infrastructure
9	Climate Change Mitigation (Climatic effects)	Minimise the Borough's contribution to climate change.	9a	Is there potential for it to lead to reduced greenhouse gas emissions?	Design guide principles to promote low emission buildings Design guide principles to promote low emission transport modes	
			9b	Is there potential for it to have a low or neutral carbon footprint?	Design guide principles to promote low energy consumption homes and buildings	
10	Environmental Quality (air, soil, water and human health; material assets)	Minimise the environmental impacts of waste and pollution.	10a	Will it maintain and, where possible, enhance water quality (including River Rother, Chesterfield Canal and ground water)?		
			10b	Is there potential for it to reduce waste from construction?	Design guide principles to reduce construction waste	
			10c	Is there potential for it to increase the variety and capacity of recycling facilities?	Design guide principles to promote recycling	
			10d	Will it maintain and, where possible, improve air quality in the area?	Design guide principles to promote sensitive land uses sheltered from air pollution. Reducing reliance on private car for transport, particularly along the A619 which is to be designated as an AQMA	
11	Economic development (Population)	Develop a strong culture of enterprise and innovation.	11a	Will it ensure that new employment sites are located in the more sustainable locations?	Amount of floorspace developed for employment by type in employment or regeneration	

	SA/SEA Topic	SA Objective	Decision making criteria		Indicators	Targets
					areas Development principles to promote local training to ensure jobs created are taken locally	
			11b	Will it promote environmental technology initiatives?	Amount of floor space/employment land for environmental technology initiatives	
			11c	Will it promote use of local businesses of, and training/business development for emerging construction projects?	Development principles that encourage use of local businesses and provide training/business development to encourage this to happen.	
12	Transportation and accessibility (Material assets)	Improve accessibility to jobs and services.	12a	Will it improve local accessibility of employment, services and amenities?	New residential development within catchment of community facilities: <ul style="list-style-type: none"> ○ Shop (200m) ○ Creche (200m) ○ Post office (500m) ○ Pub (500m) ○ Shopping hub (500m) ○ Sports centre (600m) ○ Community centre (600m) ○ Large shop/supermarket (2000m) Indicators for 11a also relevant here.	
			12b	Will it encourage use of public transport?	Provision of public transport routes and stopping points Provision of regular public transport services	
			12c	Will it reduce the need to travel?	Mixed-use development	

	SA/SEA Topic	SA Objective	Decision making criteria	Indicators	Targets
				including employment, residential, commercial and open space	
			12d Will it encourage walking and cycling?	Provision of cycle and pedestrian routes Design guide principles to encourage attractive and safe environment for pedestrians and cyclists and cycle storage	

7. Consulting on the Scope of the Sustainability Appraisal (Task A5)

7.1. Consultation on the Scoping Report with the statutory authorities is required. Article 5.4 of the SEA Directive, as stated by the ODPM document *The SEA Directive: Guidance for Planning Authorities*, makes clear that the decision on the scope and level of detail of the SEA (i.e. the Scoping Report for each development plan document) requires consultation with authorities with environmental responsibilities. These bodies are as follows:

- Environment Agency;
- Natural England; and
- English Heritage.

7.2. When commenting on the report, please consider the following key questions:

- Have we identified all the relevant policies, plans and programmes?
- What other information, facts and figures may be suitable for inclusion?
- What are the main sustainability issues facing the Staveley AAP area?
- Are we using appropriate indicators?
- Have the relationships and conflicts between the SA objectives and plan objectives been reasonably identified?
- Is the SA framework appropriate?

8. Next Steps

- 8.1. The SA Framework will be used to appraise the AAP objectives, inform the development of the SPD options and determine a preferred option for the AAP. This will constitute Stage B of the Sustainability Appraisal process.
- 8.2. Stage C requires the appraisal process undertaken in Stage B to be written up as a Sustainability Appraisal Report. The Sustainability Appraisal Report will contain the following chapters:
- Summary
 - Appraisal Introduction
 - Background to the Sustainability Appraisal process
 - Sustainability Objectives, Baseline and Context
 - SA Framework
 - Testing the Objectives against the SA Objectives
 - Identification of Strategic Options
 - Predicting the Effects of the Plan
 - Evaluating the Effects of the Plan – The Preferred Option, Mitigation and Uncertainty
 - Monitoring
 - Next Steps / Implementation

Table 18 – Summary of geotechnical data and constraints

Potential Constraints	Details	Identified Constraints
Contamination	<p>Zones One and Two (figure xx)</p> <p>The contamination status of the Zones are unknown.</p> <p>However, reference to the historical plans included in the Landmark Envirocheck Report (Ref. 1) indicates that in Zone One, the landfill, rail tracks and former colliery were located in the Zone at various points in time. There were also numerous other potentially smaller landfills shown on the maps around the Zone before the whole area was identified as a tip. It is likely to be filled material comprised primarily that associated with the former iron works.</p> <p>Reference to the historical plans included in the Landmark Envirocheck Report (Ref. 1) indicates that in Zone Two, the iron works, Old Hollingwood Colliery, tips, rail tracks, former ponds and the pipe works were located in the Zone at various points in time. It is likely the tipped material comprised primarily of that associated with the former iron works.</p> <p>Therefore, there is the potential for encountering heavy metals, organic and inorganic compounds across the Zone, which could pose a risk to human health, Controlled Waters and other statutory receptors.</p>	<p>Zone One</p> <p>Capped Landfill (Significant Constraint):</p> <p>Unknown fill material with unknown lining and capping specification presents significant contamination issues. Could also have differential settlement of buildings and attack of in-ground structures from contaminants. Geotechnical constraints from swelling iron slag.</p> <p>Silkstone Colliery (Constraint):</p> <p>Mineshafts, worked ground and spoil.</p> <p>Marsh Gas (Constraint):</p> <p>Potentially asphyxiating/ explosive.</p> <p>Steep Gradient (Constraint):</p> <p>Potential for slope instability.</p> <p><i>End use: likely to be restricted to public open space.</i></p> <p>Zone Two</p> <p>Uncapped Landfill (Significant Constraint):</p>

Potential Constraints	Details	Identified Constraints
		<p>Unknown fill material with unknown lining and capping specification presents significant contamination issues. Could also have differential settlement of buildings and attack of in-ground structures from contaminants. Geotechnical constraints from swelling iron slag.</p> <p>Lagoon (Constraint): Could be subject to leachate intrusion from surrounding landfills.</p> <p>Former Settling Ponds (Constraint): Could be subject to leachate intrusion from surrounding landfills.</p> <p>Former Pipe Works Storage Area (Constraint): Potential contamination from spills/poor storage.</p> <p>Former Pipe and Iron Works (Constraint): Potential contamination from former processes. Geotechnical constraints from swelling iron slag.</p> <p>Dismantled Railway (Constraint): Obstructions to development.</p> <p>Former buildings (Constraint): Obstructions to development from buried structures.</p> <p><i>End use: could potentially be used for residential/ employment and recreation.</i></p>
	<p>Zone Three (figure xx)</p> <p>The contamination status of the Zone is unknown.</p> <p>Reference to the historical plans included in the Landmark Envirocheck Report (Ref. 1) indicates that</p>	<p>Former Opencast Coal Workings (Significant Constraint): Collapse potential of backfill material and potential contaminative issues from operational days.</p>

Potential Constraints	Details	Identified Constraints
	<p>in Zone Three, a flour (and later a corn mill and iron foundry), an iron works, Hollingwood Colliery, rail tracks, opencast workings, sewage tanks, pipe works and current industrial practices have been located in the Zone at various points in time. It is likely that tipped material comprised primarily of that associated with the former iron works and spoil from the opencast coal workings.</p> <p>Therefore, there is the potential for encountering heavy metals, organic and inorganic compounds across the Zone, which could pose a risk to human health, controlled waters and other statutory receptors</p>	<p>Former Hollingwood Colliery (Constraint): Potential mineshafts, worked ground and spoil.</p> <p>Japanese Knotweed (Constraint): Can potentially grow through concrete/ buildings.</p> <p>Former Corn/Flour/Iron Foundry (Constraint): Contamination from former industry.</p> <p>Former Pond (Constraint): Filled with unknown material-contamination potential unknown and potential differential settlement.</p> <p><i>End use: likely to be restricted to public open space. Development in the eastern part of the Zone subject to COMAH Regulations.</i></p>
	<p>Zone Four (figure xx)</p> <p>The contamination status of the Zone is unknown.</p> <p>Reference to the historical plans included in the Landmark Envirocheck Report (Ref. 1) indicates that in Zone Four, the iron works, unidentified mill, sewage works, iron foundries and works, chemical works (including the effluent treatment plant), pipe works, rail tracks, wagon works, PVC powder warehouse, tips and ponds have been located in the Zone at various points in time. Tipped material may have comprised material associated with the former iron</p>	<p>Former Iron Foundry (Constraint): Contamination from former industry.</p> <p>Former Mill Pond (Constraint): Filled with unknown material-contamination potential unknown and potential differential settlement.</p> <p>Former Sewage Works (Constraint): Contamination from former industry.</p> <p>Former PVC Warehouse (Constraint): Contamination from former industry.</p> <p>Former Iron and Pipe works (Constraint): Contamination from former</p>

Potential Constraints	Details	Identified Constraints
	<p>works and foundries, as well as other unknown material before the iron works covered much of the Zone. There is an active COMAH status issued for the Zone for the chemical works, but given that all the buildings associated with the production of sulphuric acid have been demolished, it is assumed the licence has lapsed or been revoked.</p> <p>Therefore, there is the potential for encountering heavy metals, organic and inorganic compounds across the Zone, which could pose a risk to human health, Controlled Waters and other statutory receptors.</p>	<p>industry.</p> <p>Former Weir (Constraint): Filled with unknown material-contamination potential unknown and potential differential settlement.</p> <p>Former River Meander (Constraint): Filled with unknown material-contamination potential unknown and differential settlement.</p> <p>Biological Effluent Treatment Plant and Generator (Constraint): Contamination from former industry.</p> <p>Japanese Knotweed (Constraint): Can potentially grow through concrete/ buildings.</p> <p>Giant Hogweed (Constraint): Irritant.</p> <p>Former buildings (Constraint): Obstructions to development from buried structures.</p> <p><i>End use: could potentially be used for residential/ employment and recreation. Development in the eastern part of the Zone subject to COMAH Regulations.</i></p>
	<p>Zone Five (figure xx)</p> <p>The contamination status of the Zone is unknown.</p> <p>Reference to the historical plans included in the Landmark Envirocheck Report (Ref. 1) indicates that in Zone Five, tips, an unidentified works, rail tracks, and a chemical works have been located in the Zone</p>	<p>COMAH Site (Significant Constraint): Cannot build within 500m of site.</p> <p>Iron Slag Material (Constraint): Potential contamination from former processes. Geotechnical constraints from swelling iron slag.</p> <p>Himalayan Balsam (Constraint): Extremely invasive.</p>

Potential Constraints	Details	Identified Constraints
	<p>at various points in time. Tipped material may have comprised material associated with the former iron works, as well as other unknown material before the iron works covered much of the Corridor. Therefore, there is the potential for encountering heavy metals, organic and inorganic compounds across the Zone, which could pose a risk to human health, Controlled Waters and other statutory receptors.</p> <p>There is an active COMAH status issued to the chemical works with a hazard zone radius of 2km. The hazard zone is thought to be under review to reduce the radius to 500m.</p>	<p>Former buildings (Constraint): Obstructions to development from buried structures.</p> <p><i>End use: development subject to COMAH Regulations.</i></p>
Ground Gas	<p>There is the potential for ground gas associated with the Made Ground (including infilled ponds and landfills) and Coal Measures present across the site, and the adjacent landfill to the north of the site.</p> <p>The site has also been subject to remedial works, by or on behalf of the Coal Authority, associated with a mine gas investigation.</p> <p>Anecdotal evidence also revealed that in Zone One, a gas odour was detected near the Chesterfield Canal in the 1990's, which after investigation, was found to be "marsh gas".</p>	Potentially asphyxiating/explosive.
Mining	The Coal Authority Report indicates that the site is within the likely zone of influence from workings in seven seams of coal at shallow to 390m depth, and last worked in 1987. The property is in the likely zone	Mineshafts, worked ground and spoil.

Potential Constraints	Details	Identified Constraints
	<p>of influence from workings in two seams of ironstone at shallow depth, and last worked in 1848. Opencast works are also known to have taken place across the site. There are no known faults or lines of weakness at the surface which would make properties unstable in the site caused by mining however.</p> <p>Additionally, reference to the Mining Report (Appendix E) indicates that there are 53 shafts and adits located in Zones One, Two and Three.</p>	
Ground Conditions	<p>The ground conditions of the majority of the site are unknown.</p> <p>However, as iron slag and potentially other forms of Made Ground have been placed over the majority of the site, there may be compressibility, shrinkage and settlement hazards associated with the Made Ground. Anecdotal evidence also suggests that Zone Five has been raised by approximately 10m by iron slag from the former iron works located at the site. Zone The variable nature and potential significant thickness of Made Ground may present a geotechnical hazard.</p> <p>The nature and thickness of the colliery spoil in Zone Three (up to 30m) and in Zone One colliery spoil (40m thick) beneath the landfill consisting of 13m of spend foundry sand represent a significant geotechnical hazard.</p> <p>Reference to the historical plans included in the Landmark Envirocheck Report (Ref. 1) indicates that</p>	<p>Geotechnical constraints from swelling iron slag.</p> <p>Collapse potential of backfilled of opencast mines.</p> <p>Obstructions to development from buried structures.</p> <p>Japanese Knotweed can grow through concrete/buildings.</p>

Potential Constraints	Details	Identified Constraints
	<p>there have been numerous structures around the site that have recently been demolished to slab level (specifically in Zones Two, Four and Five). Foundations may also still exist from buildings that were demolished less recently in other areas of the site.</p> <p>Japanese Knotweed was also noted in Zones Three and Four.</p>	
Ground-water	<p>Actual groundwater levels are unknown, but could exist perched in the Made Ground or Alluvial deposits that are thought to exist across the site. The Carboniferous Coal Measures underlying the site are classified as a Minor Aquifer.</p> <p>There is also the potential for groundwater rebound following the cessation of deep underground coal workings and opencast workings.</p>	If groundwater is shallow, buried structures (e.g. attenuation tanks) may be subject to buoyancy uplift.
